

Your doctor has recommended the TearCare® System for you.

Here's what to expect:

The TearCare® System features wearable natural-blink technology that delivers heat to the eyelids where the current medical community recommends the application of a warm compress, such applications include MGD, Dry Eye, or Blepharitis.

Patients have reported that the 15 minutes of heating by the tool is comforting.

These questions will help guide the conversation with your doctor so you can get the most out of your appointment.

- Why am I a candidate for TearCare®?
- What should I expect with the TearCare® system?
- Learn more at [TearCare.com](https://www.tearcare.com)

IMPORTANT SAFETY INFORMATION: The TearCare® system is indicated for the application of localized heat when the current medical community recommends the application of a warm compress to the eyelids. Such applications would include Meibomian Gland Dysfunction (MGD), Dry Eye, or Blepharitis.

TearCare® may not be right for everyone. Please see Instructions for Use or visit [TearCare.com](https://www.tearcare.com) for Contraindications, Warnings, Precautions and Adverse Events.
